Thread: [HOW TO PERFORM A PERFECT DDOS ATTACK ! \[DISABLE ANY SITE YOU WANT !\] EFFECTIVE :\)](#)

voltkey - October 25, 2023, 3:15 pm

Today , We will learn to perform a perfect DDOS Attack and JAM any site you want !

this type of attacks is very strong and effective but SIMPLE so you will not find any problems in performing those attacks

Before we start , Don't fucken forget to leave a fucken like in Order to continue Posting Fucken HQ THREADS

In this tutorial, we are using Metasploit Auxiliary SYN Flood to launch the attack
"auxiliary/dos/tcp/synflood"

SYN flood

It is a type of DoS attack which use to send a huge amount of Sync to consume all the resources of the target system.

Let's start by launching Metasploit by simply typing msfconsole in your terminal Window. It will take a couple of minutes to launch the console.

Then use the select the auxiliary "auxiliary/dos/tcp/synflood" by typing the following command.

```
msf > use auxiliary/dos/tcp/synflood
```

Once the auxiliary got loaded type show options to list all the options with the auxiliary. you can define the settings as per your convenient.

Then you should setup RHOST and RPORT which is the target address and the port numbers respectively. [Website IP ADDRESS] You can find them by typing in the cmd " ping www .example. com "

Then to Launch the attack just type exploit, so that sync flooding will start, I placed Wireshark in the target machine to show how many packets hit the machine.

Whatever drugs you're on, I want some too.

@OP - Please atleast learn the difference between a DDOS and a DOS attack. More likely to down your own connection than anybody else's with this 2013 bullshit lmao.
