Thread: [Limerat missing Stub](#)

lukep227 - October 31, 2023, 3:29 pm

Hello everyone, I am new to using this type of software and had just finished in the builder section and built the file when i got an error message saying 'Stub not found'. I have looked into this but havent been able to find any fixes online, any help would be greatly appreciated. (if its a simple fix call me an idiot please)

I forgot to mention there is an file called Stub.exe located inside the same folder the .sln file that is used to launch lime rat in but is in the Lime-Rat-master folder instead of the subfolder - Lime-Rat-master/Project/_EXE/Debug/Misc/Stub, could it be just a simple task of moving the file?

Are you just wanting to learn how a rat operates ?? The reason i ask this is because All of that users software is detected heavily. Try to use XENO rat it is more updated then what you're currently playing with.

Kayfoxz - October 31, 2023, 3:55 pm

Stay extremely far away from LimeRat for ANYTHING other than educational purposes, as another member mentioned Xeno is much newer and at least coded in C#.
