Thread: [Android Lock Cracker](#)

papaloka - November 1, 2023, 8:52 am

I need some help in this python script.

<https://github.com/georgenicolaou/androidlockcracker>

I need to find out the PIN of a cell phone of which we know the following:

The password hash>

1136656D5C6718C1DEFC71B431B2CB5652A8AD550E20BDCF52B00002C8DF35C963B71298

Salt>

3582477098377895419

I found a error in the code, I change "long" for "int" in all the lines. But I can found the solution, can someone instruct me how to execute de command syntax correctly?

Thanks you everybody.

Have a good day.

That could take a very long time if you don't lock out the device for an extended period.

No idea. I could tell you how to crack the PIN for Samsung, but that's it.
