Thread: [Curious About Malaware](#)

osdosdosd - November 3, 2023, 5:08 pm

So yesterday I was chilling on YouTube and I looked at my history and started seeing random Russian videos being watched on my account. So I was curious and I went to my channel and there was over 100 videos about "cracked software" and sending users to a download link in each description under my YouTube account. And I went into my Google logins and someone from Russia was doing random shit on my account. But it was almost like a programmed bot or something I'm not sure if it was a real person.

I'm very curious about these types of attacks and I really want to learn and sort of jump into the world of Malaware. It's so interesting to me, if these people just do this for a living to make money, I really want to learn how to do this.

The point is, is there any resources, tips, or other hacking forums that specialize in this because I'm wondering how the hell these people learn how to do this. Or where they go to learn it, is there any websites, etc.

If anyone wants to help me get started with this or yk just chill around and we could maybe work together add me on Telegram @awent761

Well, it's going to take time. You're going to have create something (download, website) to take people's information. Than, bypass google verification, than run an automated task to post all those videos. Than make a website/application to profit off of people seeing the video..

It's going to take a while unless you're insanely smart, and most likely you'll need a team, for errors, because so far, code cannot fix all the errors you might encounter. Also you're going to need an IP switcher, likely to residential IPS to have less of a chance of running into captchas. This isn't even 30% of all the things you'll need, just a little helpful tool of what you would come by, doing this. I don't support any of it just gave you brief details of what you'll experience while doing this.

Good luck, my friend.

I don't use telegram, sorry. Feel free to message me on here, though.
