You can use Xeno for free, but no rat will function without a crypter unless private and even then. There is no rat on the market at present I would deem worth its price.

Is XENO a combination of pasted source or not? I haven't bothered to look at it.

I articulated myself a little poorly I meant where I dont need a external crypter and it is built in with a binder in the RAT, I never used Xeno before only bitrat but then I needed to buy a external crypter.

You will need external private crypts for any tool. Do not use shared stub crypter software. where can I find it?
