Thread: [Cryptorex v2 Highly accurate Crypto/Forex/Gold Trading Indicator Make Money Trading!](#)

DarkSeek - November 16, 2023, 3:43 pm

Do you want to make money trading but need a little help making good trades? Look no further!

I present the latest version of my TradingView Indicator Cryptorex Algo!

Cryptorex is a highly accurate trading indicator for trading any instrument such as crypto/forex/gold/futures and more!

Cryptorex is made up from 3 indicators. Cryptorex Signals, Cryptorex Market Structure Concepts and Cryptorex Advanced Oscillators

Cryptorex Signals

The main indicator is designed to show the best possible signals to enter trades buy printing either a Long or Short signal, the options can be adjusted depending depending on your style of trading such as swing or scalping. After hours of testing we have achieved on average 85% accuracy. This indicator also shows a coloured trend range and also a trend channel with the option to show Fibonacci retracement lines.

Cryptorex Market Structure Concepts

MSC or SMC (Smart money Concepts) is our flagship tool! Using this tool effectively will provide you with an extremely accurate way of trading.

The indicator prints when BOS (Break of Structure) of CHoCH (Change of Character) has occurred in either a Bullish or Bearish direction. It also shows money order blocks and other labels such as Strong high/low or weak high/low to determine better support or resistance.

Cryptorex Advanced Oscillator

This indicator shows RSI in a much easier to read format and will even show when bullish or bearish divergences are formed so you can make those big trades! It has options to enable or disable scholastic RSI and the wave pattern makes it much easier to see when the market is either over bought/sold.

All 3 indicators are included as a package and all have a tonne of customizable options depending on preference or style of trading.

Vouch copies are available to some well established traders who can make an honest and trustworthy review.

1 week trials are on offer to everyone for free!

full support offered on telegram @cryptorexalgo

Does it give you take profit and stop loss value too?

Anyway my TV username is misantropino.

I'd appreciate a free test for a week.

Thanks.

No, unfortunately it does not give you a take profit or stop loss indicator as well, it does come with a separate indicator where you can manually enter the SL and TP by %. The reason this is not offered is because it is impossible to accurately work out such things and indicators that do offer this are often inaccurate and are just added as a gimmick. This is a professional indicator that is designed for semi-experienced traders. We recommend setting your SL based on a % and then either adjust the SL as the trade continues one way or add trailing stop loss.

Motusora - November 18, 2023, 12:02 am

this is nice but i hope you can get a well-experienced traders here to test your indicator.

good luck with sales.

What's the difference between your SMC indicator and the Algo SMC one?

DarkSeek - November 19, 2023, 2:33 pm

(Nov 19, 2023 12:48 AM)Lowkey Wrote: [\[CITE\]](#) I don't trade as much as I used to but this seems interesting. Except for the RSI indicator.... you basically just made it look cooler ? The functionality is the same correct?

It's clearer and it prints a line to show bullish/bearish divergences.

So do I. Usually more experienced traders tend to look down on indicators however. indicators are great for new/intermediate traders who are looking to improve their skills and eventually see the signals without use of the indicator.
