Thread: [Uncovering a Palestinian & French Stealer Campaign Against Israeli Citizens](#)

resetti - November 17, 2023, 1:44 am

Recently I came across some malware on Telegram, the file was released with the caption: "i will be using my private stealer for #opisrael, message me to help it spread". This blog shows the world of Stealer-as-a-Service markets, and political hacktivism within Telegram against Israel, and some deep analysis of a very noisy piece of malware!

If you're interested in reading. Here is the link:

<https://0xresetti.github.io/palestine-france-stealer-campaign.html>

I also have some other posts if you're interested, but this is my most recent one and I thought id share it with you guys.

Sofiya1a - November 17, 2023, 2:19 am

thank you friend for this post

There are tons of like these open-sourced on github what's funny is that they haven't used any sort of obfuscation(considering the dropper is in node-js) neither packing through nexex or NSIS the screenshot method of dropping .ps1 is generic too, I would like you to send me the sample through convo, I would like to release one analysis of my own here.

Great analysis.

Thanks.

Mnemonic - November 17, 2023, 9:51 am

Very interesting share and I found the site content to be entertaining as well.

Can you send me the link in HF's convo?
I am not active on telegram yet.

Puppetmaster - December 25, 2023, 7:29 am

use jabber instead of using telegram

I use both.

Azeta - November 25, 2024, 9:19 pm

Interesting post. Would have to look into it.
