Thread: [AMD Driver Timeout](#)

SIM-3795472 - December 10, 2023, 8:06 am

Hello guys,

I have a problem with AMD driver timeout crashes when playing video games, particularly Dota 2 and CS 2. https://prnt.sc/GzmYR_0HpLq7

The problem started occurring around early September when the screen freezes randomly, and then after about 10 seconds or so, I can alt+tab and end the task manually via task manager and reconnect, which is the only way to get back into the game.

I have tried everything there is, and you can find more info from my posts on the web

https://www.reddit.com/r/radeon/comments/16mzrqx/amd_driver_timeout/

https://www.reddit.com/r/DotA2/comments/168bulb/dota_2_is_crashing/

If somebody can help me with this, it would be really appreciated.

Please, don't give me solutions like "update BIOS, reinstall drivers, disable MPO, disable fast startup", because I have tried everything software-wise, and even reseated my RAM kits and GPU, but it's still not working.

All the solutions you can find [here](#) I have already tried.

Thanks

What is the exact driver version you are using?

SIM-3795472 - December 11, 2023, 10:35 am

If we're talking about the GPU driver, I'm using the latest one, 23.12.1.

<https://www.amd.com/en/support/graphics/amd-radeon-6000-series/amd-radeon-6900-series/amd-radeon-rx-6900-xt>

This started happening since 23.8.2, I think

Honestly, you are better off RMA'ing the GPU if you can't solve this via software and have exhausted your attempts over the past numerous driver versions. I don't see a solution here.

SIM-3795472 - December 12, 2023, 2:40 am

I have tried this, and it has been working since crashes for the last two days.

https://www.reddit.com/r/battlefield_4/comments/1xzzn4/tdrdelay_10_fixed_my_crashes_since_last_patch/

Hopefully, it will stay that way.

Unfortunately, it just happened again.

Here in my country RMAing your card is an exhausting process itself. It usually takes 1-2 months, and there might be a chance they won't accept it as it's probably software-related.

I hope there will be drivers that can solve this in the future, or else I'm going to RMA it.
