Thread: [\[LIMITED OFFER\] Exclusive CustomGPT Service - No Subscription Required!](#)

Brasil - December 14, 2023, 1:34 pm

Gain a Superpower: Tailored CustomGPT - Special Introductory Prices!

Why Choose Our CustomGPT Service?

Unique Customization: Experience a tailor-made GPT solution, enhancing your HackForums journey, regardless of your existing account status.

Expert Curation: Benefit from our professional team's expertise in crafting a CustomGPT that meets your specific needs.

Complimentary Trial with Purchase: Enjoy a generous number of free prompt entries as part of your purchase.

Exclusive Technology: Our proprietary AI technology elevates our CustomGPTs above competitors, ensuring superior performance.

How It Works:

Share Your Vision: Tell us your ideal CustomGPT requirements.

Magic in Progress: Relax while our experts craft your personalized AI.

Testing Phase: Participate in test prompts to guarantee your satisfaction.

Unlimited Flexibility: Free adjustments and fine-tuning on your prompts for a limited period!

Unlimited Prompts for a Time: Send us prompts and enjoy free GPT-4 uses until further notice!

Full Access: Receive a link to integrate with your paid GPT-4 subscription, granting you full ownership.

Special Introductory Pricing - Act Fast!

Limited Time Offer: Only \$10! ?

Post-Introductory: Just \$20! ?

Standard Price: \$50 ?

Why Wait? Experience the Difference Today!

Our CustomGPTs, powered by advanced AI, set a new industry standard.
This exclusive offer is a gesture of our commitment to the HackForums community.

? Hurry! Limited Time Offer! Don't Miss This Unbeatable Deal! ?

Secure Your Exclusive CustomGPT Today!

This is extremely interesting and very unique, I am just trying to understand the application. What can I use it for that does GPT-4 doesn't do? Like what does personalizing it do? Will it answer or explain things that chatGPT refuses to? How can it enhance my HF experience? Sorry if these questions are stupid, I am just really intrigued but don't really understand at all what it is lol.

Sorry if these questions are stupid, I am just really intrigued but don't really understand at all what it is lol.

It's like giving it a really good prompt that it remembers, so any additional messages will be executed in that context. Here's a few examples:

I have one for making HF sales threads

I have one trained on some of my favourite C code

I have one trained on my own Lisp code with recommendations on what style to use

I have one for responding to retards on Discord

GPT4 is much more powerful than GPT3.5, and it is very good at getting it right.

ChatGPT itself is essentially a customGPT of the unfiltered AI. If you want an AI that will do whatever you want, you need one that hasn't been modified in this way.

see photo for details
