Thread: [PC Build under \\$2000](#)

helporassist - December 24, 2023, 11:35 am

Hi, I have a budget of \$2000 for a PC Build, it will be used for gaming such as Warzone, and then also normal computing tasks, browsing, ect...

I've had Intel previously so I am interested in an AMD build but Intel is fine,

Yodawarrior2 - December 24, 2023, 12:41 pm

Did this real quick, should be OK : <https://pcpartpicker.com/list/v8wNN6>

Thanks boss, while you're here, do you recommend Liquid Cooling, is it worth the extra cost?

Depends on what you wanna use it for, if it's for intense gaming it can be worth and it might be quieter, otherwise not really.

If you have the extra budget, go for it !

Check out this liquid-cooled build.

Which one ? I think you forgot to post the link lol

Omniscient - December 31, 2023, 11:27 am

Liquid Cooling comes into play in a few scenarios.

1. Massive long-term sessions of gaming
2. You overclock GPU/CPU.
3. The room you're computer in is warm.

I've never really needed liquid cooling myself. I don't do any of that.

Any chance you can just upgrade your existing system to save money? Example is keeping your case and power supply, replace the MOBO, CPU, and GPU. Most likely need new RAM.

Is this your first build?

btw, I like shopping on a budget at Woot (Amazon owns it).

https://www.woot.com/category/computers/computer-parts-components?ref=w_cnt_cdet_pc_7

Also a section for desktops including gaming PCs for reasonable prices.
