Just combing everyone's work into one place :)

If I made an error here or you have something to edit/add/adjust comment below!

Also I am not using all of this just trying to analyze how secure I could be possibly.

If you found the following retarded just be honest I am bored.

resecure isp gateway,
new pc user keep files,
remote desktop protocol,
end process-trees, clear cpu cache, clear privacy security location, flush dns, optimize updates,
disk cleanup,
spoof uid, mac, hwid,
all out-going on proxy,
connect my vpn,
user agent switcher for browsing, webrtc off, scripts off, data syncs off, history wiper on

To get a better knowledge about a opsec(operational security) than I recommend to visit a dark web dread forum. There is extensive guide about a opsec. You can find dread forum link when you visit a "dark.fail" domain
