Thread: [Some Help about Whatsapp Gd Extractor](#)

Pecoranera - December 28, 2023, 7:58 am

Good morning everybody,

I m using some whatsapp gd extractor like yuricosta and whapa but everytime but even if i used the right email and password everytime they gave me "bad authentication error"

I-m using the updated python 3.12 and i've installed all the requirements the script needs so can someone help me?

It seems like you are encountering authentication issues with the WhatsApp GD Extractor tools you mentioned. There could be several reasons why you are experiencing this problem. Here are a few troubleshooting steps you can try:

1. **Verify your credentials:** Double-check that the email and password you are using to authenticate with WhatsApp GD Extractor are correct. Make sure there are no typos or errors in the credentials you are providing.
2. **Ensure proper permissions:** Ensure that the account you are using has the necessary permissions to access the WhatsApp data you are trying to extract. Some tools may require specific permissions to access WhatsApp data.
3. **Check for updates:** Ensure that you are using the latest version of the WhatsApp GD Extractor tools. Check for any updates or patches that may have been released to address authentication issues.
4. **Review documentation:** There may be specific requirements or configuration settings.
5. **Contact support:** If you have verified your credentials and are using the latest version of the tools, consider reaching out to the support channels for the WhatsApp GD Extractor tools. They may be able to provide specific guidance or troubleshooting steps to help resolve the authentication error.

It's also worth noting that accessing and extracting data from WhatsApp may be subject to legal and ethical considerations, especially if the data belongs to others. Ensure that you have the necessary permissions and are acting in compliance with applicable laws and regulations when using these tools.

If you continue to experience issues with authentication, consider providing more specific details about the error messages or any additional information that may help identify the root cause of the problem.
