Thread: [How to automate mobile app actions?](#)

Schizoid - December 31, 2023, 5:56 am

I need to automate an app on IOS that needs user to enter input check it and add/subtract values to it so it change the input value. I need to do verification in the app for these numbers.

Is it possible to do this with python and selenium?

I don't know if I explained myself well sorry.

Thank you

(Dec 31, 2023 07:57 PM)m0hx Wrote: [\[CITE\]](#) U could try voice commands lol.-. Iv seen few TikTok's of people using the voice commands feature In accessibility to make custom word for unlocking the iPhone. Maybe do smthn similar?

When I had jailbroken iPhone 5 like few years back you could easily automate shit with. Tweaks. Not sure if they're still available cuz I no longer jailbreak my iPhone.-.

Thanks m0hx for the reply. Exactly on jailbroken iphone I used Activator. But I found my answer of what I was looking for yesterday :).

I'm curious on how you are going to approach this?

I miss jailbroken devices... I haven't jailbroken an iPhone in years.

Yes I should have share what I found. I used Sikulix and android studio for my bot.

There's also pyautogui but they don't have images recongnition.
