Thread: [Free Crypter | Polymorphic x86 Crypts | Runtime FUD | BYPASS ALL](#)

osn64698 - January 6, 2024, 4:37 am

I have my own x86/PIC LoadPE that is unique and embedded into legit files.
I want to test it with different malware, feel free to pm me.

It is WIP and will be improved, The following AV's are easily bypassed:

Avira
Bitdefender AVG
Avast Windows Defender 10/11
Kaspersky

NET is supported (Only if I will bother so contact me)

All you have to do is :
Leave a post here and pm me a way to contact you.

I don't care if you scan on VT or do whatever. It doesn't affect my new builds.

If you want to buy the source code:

If I open the files while offline then restart the pc before going back online does it still leak with this crypt?

osn64698 - January 6, 2024, 8:06 am

The file is hosted in the BIN, you do not need internet. So it will work if that is what you ask.

It is WIP and will be improved, WD is easily bypassed. (# is supported)

Currently no .NET support - probably later, unless I am decided that NET is too shitty.

I vouch for this guy, bypassed all AV's + Online Sandboxes.

Crypted my R3mC0s, with a low stub size.

Hello,can you send me this?

Thank you

osn64698 - January 7, 2024, 3:37 am

For those who can't read, I suggest re-reading, I don't give out the crypter, I give out free crypts.

Feel free to send me a link to a BIN in PM, I will crypt and return a link back - free of charge, best crypt you can get here, guaranteed.

Hello,I am interested in this?

osn64698 - January 10, 2024, 12:59 am
Today host bin is : Kaspersky INSTALLER.

Ever wanted to execute programs from within Kaspersky? You can do this today!

The PIC shc is embedded inside a real installer of an antivirus, gets executed on the fly. Fun times to be alive.

Obviously this is for "learning purposes" only boys!

Thanks.

Still fully FUD runtime.

Fixed 2 bugs:

1. TLS Storage Ptr - for those who like static variables ;)
2. TLS callbacks are now supported.

Today special file is : Fortinet VPN

x64 is being worked on boys.
