Thread: [I'm a very wealthy SKID hacker -- I was a ratter for the most part, but I need YOU! >](#)

YadOrez - January 15, 2024, 5:36 am

Please, I am wasting my days on my computer, not learning anything, not living up to my ability as a human.

I first of all want to know; what do YOU do? What are YOU learning? How to go about doing interesting/fun things, that give me experience, and keep me focused?

I want to use Chat GPT / WormGPT, well, I guess only if needed, but I feel like it will be, I just can't bring myself to think of ideas to pursue.

I want to continue to make money. I did a VERY big BTC heist, and managed to get 40 BTC out of a Coinbase!

So yeah... that was with a RAT, recently.

But besides hacking, I also want to know what else you're learning, what's good to fill your mind with/spend your time on.

Who are you subscribed to on YouTube? What are your bookmarked tabs in your browser? What are your go-to games, and so on.

If you're willing to share with me, truly high quality information, I will pay you.

I don't speak to anyone or have any friends, for the last 8 years I have felt the government have been hacking me. I played a game called Habbo Hotel until I was 17, where I nearly got done for webcam hacking/extortion (with a RAT lol) but got found NOT GUILTY 2 years later.

If you're a seriously down hip hop homie like me, or whatever floats your boat, metal, opera, country, please, post below. I'm also interested to hear any good music. Thanks!

Tentco - January 15, 2024, 5:53 am

First of all Welcome to HF, You don't need to pay someone for this.

Now to follow up your questions,

Quote:I first of all want to know; what do YOU do? What are YOU learning? How to go about doing interesting/fun things, that give me experience, and keep me focused?

I'm usually working as a Malware Analyst/Developer, Currently I'm learning driver development. For doing interesting things does malware interest you? If yes ever decided to learn red-teaming?

Quote:But besides hacking, I also want to know what else you're learning, what's good to fill your mind with/spend your time on.

Gaming probably.

Not many, only some selective channels like John Hammond, OA Labs.

Thanks for the reply :-)

What malware would be interesting for me to develop? Like can you give me some ideas? I've made a few pages with ChatGPT/WormGPT but... I lost my interest/focus a while back. I have an amazing domain for something that can't be talked about here, apparently. But I need to find a SMS service with custom sender ID that will allow me to use 'DPD' as the sender. (UK) -- it's really quite a erm... cool ting for me. But I just don't get around to doing it. Could you tell me; what sort of stuff could I create to spread malware? I've got a few things no one is using. But I just can't find the right energy to pursue spreading. What malware have you developed? Please, do tell! :-)

As for gaming, I play Fortnite and just downloaded Apex Legends as it seems pretty fast paced and cool. I'm gonna give it a go. What about you? What games do you play? :-)

I am really wanting to build a botnet again, an army of high quality bots that I can monitor and scavenge from when I want to do that...perhaps I shouldn't say this here though. HEHE :-)

That depends on you what you find interesting, I usually develop crypters/droppers/loaders/ransomwares, ChatGPT/WormGPT are just barely fine tuned LLM's they won't give you production ready code to develop anything, you could create different sort of different stuff to spread it depends on you, for eg - worms, RAT's, fake docs, Inks etc..

I've burned some corp mails but that was usually using a .lnk/.js stager with dll-sideload(with a legit microsoft signed cert).

about a custom sender service you're better off looking in the market place in underground forum.

I usually play valorant as I was in p2c community related to that.

Ooh I have a method for lnk to make it FUD all the time :D

That's interesting. I don't really like ransomware, as I find blackmailing the innocent to be extremely concerning.

Thanks for the help though! Just watch out you don't get caught. Too many innocent people have registered on this forum and ended up with their lives ruined.

Yeah making lnk fud is easy just add a b64 encoded URL as target as long as your dropper is FUD.

Yeah, I will keep that in mind to not get caught.
