I'm not a Windows user anymore, but I like the new wallpapers from Windows 11 (at least, the best GFX they made for Windows 11, the GUI sucks compared to W10 imo)

Try to get AI to make a minimal one with like a wizard-like clipart logo, you got it to try and attempt to make logos?

Dall-e can come up with some good logos with a good prompt.

Here's mine, I'm a really big fan of the outer space 4k wallpapers. I usually switch between this one and a animated outer space one I got from steam, I just forget to turn it on sometimes. But here's the main wallpaper.

Oooh, this is nice. I love space & that's nicely done. Did you find this or generate it or create yourself?

I found this one, but I do have some nicely generated ones. I really like the animated one I got from Steam though. You just have to remember to launch the app every time you turn on your pc. Which I usually forget.

It's either that one or another one with Darth Vader on a snowy planet. The contrast between his black suit, red lightsaber and the blue hues of the snow and sky is pretty cool.
