Reverse XWorm settings

This is a Application to get all XWorm Client settings such as Host, Port, Encryption key and everything out of the builder

- + Working for Obfuscated and not obfuscated Clients
- + Display all function settings
- Wont work with additional encryption / protection

UsageDrag and Drop the Client onto the XWormSettings.exe and it should show you the settings

Open CMD.exe, drag the XWormSettings.exe into it, do one space bar " " and drag the client in it, press enter

How it works

Its loading the assembly then using Mono.Cecil to reverse it and check for strings using the Regex Pattern (Encrypted strings for host, key etc.)

Code // Return true if the string matches the Regular expression

```
return Regex.IsMatch(str, "[~!@#\\$%\\^&\\*\\(\\|_\\|-\\|=\\{\\}\\|\\/\\\\\\\\\\\\\\\\/:;\\\"'<>,\\.\\.\\?/]");
```

Warning!! Wrong usage may leads that you mistakenly execute the client, causes that you infect yourself! Use at own risk! I'm not responsible for anything! Recommend to use on a Virtual Machine

Hi

As you can just see right here, the url you sent in here contains infected content.

This code is 100% made by myself and you wont be able to find it anywhere

Have a nice day
