Thread: [What Happens If You Send Crypto On Mainnet To A Wrong Blockchain Wallet Address?](#)

inf3ctz - January 17, 2024, 11:35 pm

1. Will the crypto get lose or it will be broadcasted? If broadcasted, is it the sender or receiver blockchain it will be broadcasted?

Example: Sending BEP20 coins / TRC20 coins on mainnet to Bitcoin wallet address

2. Will the crypto be displayed in the receiver wallet balance? If yes, how will the crypto displayed in the receiver wallet balance "non-spendable or spendable"?

Example: Bitcoin wallet address balance after Crypto was sent from BEP20 / TRC20

3. Are these applicable to all Crypto's deployed on Mainnet even the unlisted cryptos on uniswap?

Example: Memes Coins, Shit Coins.... on Mainnet

Just asking respectfully. Thank you and expecting your answers

Different chains derive their addresses differently. Your wallet holding BEP20s/TRC20s would not accept a Bitcoin address and not allow you to send those tokens to a Bitcoin address. If the wallet did not properly check, it would attempt to process the transaction and the transaction would fail. You would not see any reflection of any of this activity taking place on the bitcoin address.
