Thread: [\[AKIRA v2.1-100%FUD\] Enigma: Navigating Through 7000+ Unexpected Logs](#)

SIM-2564555 - January 19, 2024, 3:46 am

Attention Team,

Even if you're a pro in deploying stealers, botnets, or other tools, the biggest hurdle always is runtime detection. You'll see loads of ads for crypters claiming '100% FUD,' yet in reality, you're doing well if you manage to bypass Windows Defender and maybe another major antivirus. After shelling out hundreds, that's the peak performance you can expect.

During our trials with AKIRA, we began using ads to disseminate it and monitor its detection rate. Honestly, I was taken aback by the outcomes. ?

We started to receive roughly 200 logs each day. I'm now ready to divulge what I did, as many of our users are keen on learning how to spread AKIRA. I'll give you a quick rundown here, but a comprehensive guide, free to our AKIRA purchasers, is on its way.

After some digging, I found Google Ads to be the most efficient and simplest method for distribution. Here's what I did:

Firstly, I began searching for VPN landing pages of well-known firms and quickly found my target among Google's Sponsored pages.

Secondly, I utilized a free online service to replicate these pages, including the registration and welcome/download pages.

Thirdly, With the aid of ChatGPT, I made appealing changes to the offer page, like adding a free 90-day trial.

Fourthly, I got ChatGPT to develop a PHP registration file to store client data in a database for possible later use. ?

Fifthly, I asked ChatGPT to alter the third page (the registration success and welcome page) to initiate the download of AKIRA right after registration completion.

Finally, After fully testing these pages, I kicked off a modest Google Ad campaign and was stunned by the results. ? In just a week, we received over 2000 logs, and people even started sharing my landing page as a genuine offer. ? In three weeks, without any further ads, the logs soared to over 7300. ?

I'll share more details and a guide later for our stealer users to enhance their experience testing AKIRA."

I feel somewhat mixed about this thread. On one hand, i like that you shared the high level overview of how you decided to spread. However, on the other hand, the thread title makes it seem like we might get some nice data and stats about the 7300 stealer logs. This is ultimately why I clicked and I am abit disappointed to not see that and instead saw a glorified ad.

I look forward to the more details later.

Question: Of the 7300 logs, are these 7300 unique infections or is it a lower number of infections and 7300 entries across those infections?

Question 2: Since you make people register before downloading, do you have any stats on the registration-to-infection ratio?

Question 3: What sort of CTR did you get on your google ad?

The PHP code prevent any replication on the database, but that ca does not prevent who want to try registration twice without any logical reason, but I think those are neglectable number

Question 2: Since you make people register before downloading, do you have any stats on the registration-to-infection ratio?

i have not count all logs as it was for testing only but for more than 4 weeks I was receiving around 200 daily approximately 6000 logs

Question 3: What sort of CTR did you get on your google ad?

CTR was 6%

And of course, I'm advertising for my AKIRA not about my spreading experience ?

InspectorGadget - January 19, 2024, 4:11 pm

I just thought of another question - why bother making the website registration hash the password? Why not just store it in plain text so it's another easy way to grab passwords.

Nice question, I'm not PHP coder as I explained previously I asked chatGPT. To build it and ChatGPT automatically create that hashed as security level, it thought it for legit work, finally while we have the encoding code we can decode it, are not we ?

As well you are welcome if want to get this PHP code and sample of the records and their saved logs.

Your questions helped me to approve AKIRA capabilities ?

princept2024 - January 23, 2024, 9:55 am

i wil buy it let see if it is fud

Xmercilios - January 23, 2024, 10:48 am

looks nice, can i be a part of the test team.

princept2024 - January 23, 2024, 2:52 pm

nice to see a high quality member IN HF keep it up

Just curious, how did you use Google ads without verification or payment linked back to you?

SIM-2564555 - January 25, 2024, 11:37 pm

Hello Dime, if you're interested, there are numerous providers offering Google Ads accounts that are verified and have payment methods already linked.

Gotcha. How much did you spend on the ad campaign?
