Thread: [reWASD.exe spoofer help](#)

Hayden4127 - January 19, 2024, 4:05 am

reWASD is a controller emulator for pc is it simple to make a program spoofer? to bypass a program that is banned and can't be run on the PC. won't launch the game past the loading screen. any ideas please an thank you

First you must to analyze the banned program thoroughly to understand its detection mechanisms and devise countermeasures accordingly. Then employ code obfuscation techniques to make the spoofer harder to detect. It will always be required to continuously adapt the spoofer to any changes in the detection methods employed by the banning program.

Proxy usage can also be helpful. It obscure the origin of the spoofer and can evade detection.
