Thread: [Problem with htaccess need help](#)

Dag0bertDuck - January 23, 2024, 2:35 pm

Hey guys a question to the pros here,

The System is running on a
Windows Server and i use Apache

i try to call the htacces file where is a other file. The problem in the error log is the Server cannot find the file. I dont know why but i need to write it down in Windows Path format like
C:\example\example\file

i think the htacces dont accept "\" and in the error log it is always turned around to "/"

cannot find file in C:/example/example/file
it rotates ->\ to ->/ and because that it cant find the path

how can i fix this ?

I believe even though Windows expects backslashes, you should be using forward slashes.

A few other things to double check:

- Ensure your path is using the correct case. Eg, /Users/... rather than /users/...
- If you have a space in your path like "../My Documents/...", place a backslash before the space like so: "../My\ Documents/..."

RewriteEngine On

Ensure mod_rewrite is enabled

RewriteRule ^old-directory/(.*)\$ /example/example/file [L,R=301]

Redirects all traffic from /old-directory/ to /example/example/file
