Thread: [MD5, SHA-256, SHA-512 - Pay 1 BTC if successful!](#)

LordLoedmeister4000 - January 25, 2024, 1:50 pm

Hello and good evening!

I have a hash again and hope it works this time! Pay 1 BTC if it works!

md5: 8e910cc94dc6ca57285173d8f97a7f22

sha256: a58523bd82fb69d2f09aa6ded7ff7ca5af91716c15332aaa6ef7a69a4ef672ee

sha512:

943272ea0bf3dfeeca8b5b4b620d6a9b063e246eb94bd05b05b7f6143b33734c439de401a3c68ee7d3bcd80d43cf9321282d8c3054f607b118947c79b0 c0c92c

The MD5 hash was generated by Windows 11 with the function! Likewise the other Hash! If anything else is needed, I'll be happy to answer the questions!

Truth - January 25, 2024, 2:11 pm

um, you want this cracked? if someone could crack these they could get way more than 1 btc

webdev77 - January 25, 2024, 2:11 pm

When you say generated by Windows 11 with "the function", do you mean a file hash?

DramaKing - January 25, 2024, 3:42 pm

Why crack the hash when you have the plaintext? No one is going to be cracking a hash generated by a file. I suggest going back to basics: <https://en.m.wikipedia.org/wiki/MD5>.

Probably. This is one of OP's previous threads:

<https://hackforums.net/showthread.php?tid=6261333>.

Good day!

I say thanks for the answers and now I want to execute because I don't have the knowledge how to crack something or a wallet.dat file or extract the hash, I just did what I read on the internet!

In Windows 11 there is the "Hash" function if you right-click on the file, that's how I got this hash, that's all I know!

I'm not a hacker and I haven't worked with it yet. The reason I'm here is because I'm really looking for help and I found this forum in my search!

My problem is this:
I am a dealer (NO??? I do NOT buy or sell wallet.dat files on the internet) and I have over 60 different wallets, the reason why I have so many wallets is known to me and doesn't need to be asked.

A few weeks ago I bought a new computer and I backed up all the wallet.dat files because I know how it works. Afterwards I was disturbed and I forgot to save my password list for the wallets and on the old computer I removed and destroyed the hard drive, bought and installed a new hard drive and then sold it.

Now I have my wallets, but I'm missing the passwords! The wallet or MD5 that I have provided here is not an MD5 from one of my wallets, because I realize that my Bitcoin can be stolen, I'm not completely stupid???

But if it had worked with this wallet, then I would have agreed to work with the person who would have decrypted the hash or password for me???

I said, I'm not a hacker, my knowledge is very limited because I haven't dealt with it or want to deal with it, I JUST WANT ACCESS TO MY BITCOINS OR WALLETS.

I'm just looking for help and I'm willing to pay a very good commission if I'm successful and maybe there's someone who can send me a step by step guide so I can do it and maybe there's a tool someone can give me , so that I can at least read the PrivateKey from the Wallet.dat file if the password doesn't work!

No links to Wikipedia or anywhere else will help me because I'm not interested in it and I don't understand it either!

If anyone can help me, please contact me or let me know how I can reach you!

Sorry, I can't help. You can't get the password to a wallet file by generating a hash of the file. You need to extract the hash of the encryption from the file with bitcoin2john. Problem is that the Bitcoin encryption algorithm is GPU-resistant, and it will take me over a week to do one wordlist with no mangling.

LordLoedmeister4000 - January 28, 2024, 9:43 am

@DarmaKing

Ok, I understand that, but is there a guarantee that if you need a week that it will be the password or is it "just" a try?

The problem is, I didn't use words, but I generated the password with a tool that consists of 20 - 30 characters, with upper and lower case letters, with special characters and also with numbers.

I'm slowly giving up hope that there can be a solution here in at least a week...

If it's a common or reused password, it would be a very good chance. Otherwise, it's quite small.

Oh, password generator? That would really have helped to start with. We're now talking up to 2.5×10^{34} years. Those password generators are designed so that passwords can never be bruteforced.

You are looking for 'btcrecover' you can find a github link with resources by gurnec. If you need assistance, feel free to DM me but please respect my time as it is not simple to just "crack" wallets. Hope this helps.

Do you think that you can crack a 20-30 character ASCII password?
