Hello people of HackForums!

I have found this site <https://chancedash.com/?i=ZFAWKY>, which is sorta an all tasks kinda of deal with a bit of a strange payout. Completing tasks (IE Surveys/watching ads/Download and play a game) will payout in "coins" however these coins can be redeemed for scratch cards which reward real money!

I can vouch as I have had a payout of \$12 after using it for a few days.

To note:

\$5 was from my starting coins (i suspect this can vary due to the way the scratch cards work for it This site has quite a few of Ads but using on desktop makes it alot easier to deal with however I could use it on my mobile

They offer BTC/TRX/Binance payouts instantly but I think PayPal payouts take longer (I cannot confirm this as I had a BTC payout)

Or add ZFAWKY to the referral code point.

Thanks and good luck!

I prefer to stay far away as possible.
