Thread: [Help with Cap Crack](#)

kohut124 - February 6, 2024, 12:48 pm

So having troubles with this new ISP called Summit. They've decided to deploy their own routers. I have a CAP of one can and can get others but trying to specifically crack this one.

Also have another cap that I'm stuck with. I left the cap files uncleaned and will leave as much info as possible :)

Would GREATLY appreciate any help.

Area code: 727

SSID: Summit08F350
BSSID: 08:2C:ED:08:F3:5B
Manufacturer: Technity Solutions Inc / Looks like they have a few different mesh routers
ISP: Summit
Country: USA
Tried HashCracks's free wordlist

encryption WPA+PSK
encryption WPA+AES-CCM
essid cloaked="false"
carrier IEEE 802.11b+

device.report/technity-solutions

I have found no information about the default keyspace for Summit.
