Thread: [Hello guys is C# a good language to learn first](#)

Newtails - February 16, 2024, 6:49 am

I'm a newbie in programming I don't know anything not even the basics. I would like to learn a programming language to write programs like RATs Keyloggers and stealers. Is c# a good start?

Vrases222 - February 16, 2024, 9:04 am

C# is a great base and once you know one language it's a lot easier to learn a more. if you're looking at getting into malware development you will probably want to learn C which is a lot more of a challenging language to learn so probably good to learn a bit of C# and then when you're comfortable move on to C.

Newtails - February 16, 2024, 10:51 am

Thanks for your reply. I think I will head straight into C or C++

HALx86 - February 16, 2024, 10:57 am

C# is good if you're doing mostly Windows. Unfortunately it forces you into OOP which can be difficult for beginners.

Newtails - February 16, 2024, 10:59 am

Is C# any good for writing malwares. I'm interested in Rats and stealers.

Klonopin - February 16, 2024, 1:03 pm

I mean C# is a great language to start learning, but when it comes to [censored], lower-level languages will always be the better option.

Great, defs a challenge but once you're comfortable with C learning any other language will be a breeze.

Newtails - February 16, 2024, 4:18 pm

Thanks you all for your inputs I will definitely start with C

blackrose_x0x0 - February 17, 2024, 9:52 am

Yes, C# can indeed be used for writing malware for sure but as others have said, might be better to learn something like C if that is your main goal.

Take a look at RATS and stealers on GitHub and filter for the ones written in C# or C (or whatever language you choose). You can take a look at how those are written once you're familiar with the language to get an idea.

C# is a great language to learn overall but can be difficult in the beginning.

Okay thank you guys a lot for your honest replies. I have decided to start with C first. I have started

yesterday. I hope I can stick it out and finish it ?

Anyone familiar with rust? Can be use also to write good malware?

Starting with C. Ballsy. ?

kalvelign - February 18, 2024, 7:37 am

forgot about c#, go with C or rust

Lefty - February 18, 2024, 8:31 am

I suggest starting off at VB.NET and then starting up from there, it's good as easy to get started on a small program that's not too complicated

blackrose_x0x0 - February 18, 2024, 9:05 am

I want to add to stick with one language while learning how to program initially and avoid jumping from language to language.

Yes, rust is fine for writing malware as well. There are quite a few members here who swear by it.

Best of luck to you on your coding journeys ?

In my opinion very smart.

Thanks much bro

Thanks much to everyone for your replies.

beastx000 - February 20, 2024, 7:02 pm

You can write RATS and Keyloggers with almost anything, if you go to github and search for stuff like that you can find many examples. However, I would definitely just choose one language and stick with it, so I'd say go with what most replies said here. If that's way too difficult then start with an easier language and go from there.

And yes, I think C# is probably a good language to learn or C++ when it comes to such things.

Kalvaxas - February 20, 2024, 7:10 pm

I was just thinking that. If I would have started with C or C#, I would have more than likely gave up.

The syntax of C is beyond complicated for no good reason. I love Python syntax. Lately have taken a liking to Ruby / ROR.

Newtails - February 21, 2024, 3:10 pm

What your saying is that c is too difficult for me to start as a newbie?

Okay so your say c is way too difficult for a beginner like me

siliconvalley - April 3, 2024, 2:13 am

The best language to learn first is the one that aligns with your interests, goals, and the type of projects you want to work on. If you're interested in game development, software engineering with Microsoft technologies, or backend web development, then learning C# could be an excellent choice. However, if you have different interests or career aspirations, you may want to explore other programming languages such as Python, JavaScript, or Java.
