Thread: [Failure to connect to the victim's computer \(RAT\)](#)

Inimni3 - February 22, 2024, 3:26 pm

Hello,

I was connected to several computers in the Rat software through playit.gg, but unfortunately the playit.gg account was blocked.

Of course, I have a domain address from noip.com as backup, but the problem is that only some computers connect to this address through noip.com.

Some of the hacked computers are from a certain country and my problem is only with that country and it seems that that country has blocked my domain address.

Also, I connected the domain registered on the noip.com to the new account on playit.gg, but it didn't help

Does anyone have a solution to this problem so I can reconnect to hacked systems?

Thanks.?

SimpleTon777 - February 23, 2024, 2:33 am

Clear your cookies, And then try it.

DI?E - February 23, 2024, 10:58 am

Do not use noip for such activities.

Nope, you have lost them, unless you can redirect any of your domains to another IP.

btw. next time make yourself a proper setup or just stop doing it all

I run RAT on 3 computers, the problem is not cookies.

Thank you for answer

How can i redirect No-IP domains to another IP?

The problem is not No-IP, the problem is that a country that has imposed strict restrictions on the Internet does not allow connecting to No-IP. But computers in other countries connect well!

Thank you for answer.

ngrok with rdp wrapper for next time as backdoor. unfortunately your current clients are likely lost unless you point dyndns to new local geo region vps. Your only option is to target them again with a new payload and hope lightning strikes twice

Please read

https://github.com/CongducPham/LowCostLoRaGw/blob/master/gw_full_latest/README-remote-access-ngrok.md

I even bought a Windows server from that country that has this problem and after doing the noip settings, hacked computers from other countries still connect, but hacked computers from a specific country don't connect.?
