Thread: [\[Beginner Guide\] How To hack WiFi connection easily!](#)

**pinguoin** - February 22, 2024, 10:14 pm

(Nov 26, 2016 11:21 PM)pinguoin branched='true' Wrote: [\[CITE\]](#) Intro;

Since i've been using this trick since 3 years and that i've never seen any guide about this, Here i am doing it ! My main language is french so, im sorry if there's alot of issue about my writing but i'll do my best and try to fix it as much as i can :)

I've not paid any internet since 3 year yet so i hope this can help you :) !

I've tried with KaliLinux but that one program is the best i've found and i'm still using it, they do updated sometime, but u can easily update all the program inside the Linux.

Starting;

So there's some requirement like everything;

Requiered;

Wireless Antenna or simply the "wifi thing from your pc";

A USB key ( 2-4gb ) or CD to boot on, containing the program installed; ( I highly recommend the USB key )

Wifislax.iso ( You can find it easily on Google from their main Site ).

Yes it's mainly Spanish but you can switch it to English once the file booted.

CD Installation;

Just burn the "Wifislax.iso" to a cd :)!

USB Installation;

1. Format a USB key to "Fat32";
2. Once "Wifislax.iso" downloaded, open it with WinRar. ( Right-Click, "Open with> WinRar" );
3. Extract the whole file to your USB key;
4. Install Wifislax so it can boot on it ( Open your USB file "\*":\Boot\Wifislax Boot Installer.exe";
5. Follow the spanish instruction ( or just try see if it show you the USB letter drive and press on "s" for "Si" then it will complet by itself till it get to "Press anything to complete"
6. Finished ( Yes it's already ready to boot ! )

Hacking a WiFi !;

1. Close your PC;
2. Start you PC again and press on the "Startup Boot key" ( if you don't get it check your bios setting. );
3. Choose the USB dongle that you've configured;
4. Now it's writed in spanish, but you can get it to english, press 2 time on the "down arrow key" then "Enter", or just press on the sentence with the english word :P ;
5. I recomend booting with the first choice of the list;
6. Then this choose is your personal choice, but i recomend "KDE with persistense" but it happen sometime that "XFCE" get less problem;
7. Once fully booted up there's "ALOT" of program that can help you to get throught WPA,WPA2 and WPS key, i recommend you to explore them and learn them, google can help you alot, but i recommend 2 Easy program for beginer with a GUI so you can get your wifi easily :) "GiminisEditor (All-in-One ) StartMenu>Wifislax>WPS>GiminisEditor (All-in-One), or PixieScript

StartMenu>Wifislax>WPA2/WPS> PixieScript"

8. Process to the attack and watch it being done :) !

9. Once the WPA Key acquired note it and use it once in windows :) !

I won't be showing you guys how to use the whole thing since it's full of program, there's everything a hacker would need to pentest into a server or something, you can even sell to people needing internet for 30-40\$ the key at their home if you have a laptop ( i actually do that :) ).

Have Fun!

I really recommend to explore this program to everyone who actually like to use Kali or things like that!

Thanks for ready, Sorry if there's no image and if there's any question just leave it below, i'll be answering as soon as i can :) !

Thank you for your guide brother!

**taipan2000** - February 25, 2024, 11:42 pm

Great guide! Thank you

**mobi** - February 26, 2024, 8:29 am

i will most likely never do this, but it was interesting to read, thanks for this

**mikeyp** - November 26, 2024, 11:07 pm

Very interesting, thanks for the information.

**PreferLog** - December 8, 2024, 1:52 am

this is a great guide thanks

**DjShadownet** - December 8, 2024, 1:15 pm

great guide Thank you information.

**zodiac9** - December 8, 2024, 3:06 pm

thanks , most def will try it out

**Pr0m3th3us** - January 28, 2025, 10:15 am

Can you use a USB WIFI network adapter with this?

**s0lo** - January 28, 2025, 11:59 am

I would assume anything with packet injection and monitor mode works, I will try this out with a alfa usb wifi adapter in a minute

**ThickRick** - January 31, 2025, 4:21 pm

Awesome, I just moved to a new place so I'll try it out. Thanks
