Thread: [Extractor Stealer - the best Native stealer | Encryption | FUD | Success ~95% | RunPE](#)

reaper_orig - February 25, 2024, 12:47 pm

Extractor Stealer is a native product with a clear and appealing interface where all functions are meticulously developed. Everything, from design to technical support, is maximally customer-oriented, focusing on their time and productive work. The buyer can always seek help and will receive it. Additionally, the unique build will further simplify and accelerate work. The functionality is regularly updated with new features and original solutions. Feedback, constructive criticism, and customer suggestions are welcome. It has also been tested and posted on other forums.

?Regular cleanups

?RunPE, hidden operation for both users and antivirus programs

?Well encrypted, with verified crypters available

?No dependencies or loading of external components

?High success rate

?The stealer does not create any files or leave traces, everything is in the RAM

?Native, written in C++

?Works on all current versions of Windows OS from Windows 7 to Windows 11, including servers

?Protection against virtual machines and honeypots, reducing antivirus visibility and detection rate

?Collecting data from current software versions, with an expanding list

?Protection of the web panel against brute force attacks

?Extensive checks for the panel's correct operation and installation

?Sending screenshots and metadata to Telegram

?Grabber with an unlimited number of rules, no need for rebuilding

?Traffic encryption, protection against sniffers

?2FA for the panel

?Collecting all browser profiles, not just default profiles

?Unique build for each user

?Technical support and free updates

?File cleanup is also performed with each update.

Specifications"Specifications" ([Click to View](#))

?Support for all current versions of Chromium-based browsers, including Vivaldi, Chrome, Microsoft Edge, Opera, Epic Privacy Browser, Opera Neon, Opera GX, Brave Browser, SRWare Iron.

?Data collection from Chrome browser version 108 and above, including passwords, history, download list, credit cards, addresses, autofill data, cookies, with protection against read prohibition.

?Data collection from Gecko browsers, including the latest versions of Mozilla Firefox.

?Collection of cryptocurrency wallets in wallet.dat format.

?Data collection from cold wallets and extensions such as Metamask, Exodus, with the list being able to be specified if needed.

?Data collection from applications and services such as Telegram, Discord (including all tokens), Thunderbird, Outlook, Filezilla, Microsoft Edge, ?Steam, Total Commander, Minecraft.

?Ability to take screen captures.

?Data collection from Windows Vault, Internet Explorer.

?Collection of PC information, including process lists.

?Collection of information about network interfaces, including MAC addresses.

?Panel log filtering.

Any vouch or discounted copies for vouch? Looks interesting, would love to try this out.

Are we able to host this on our own hosting/domain?

fxweezy - April 29, 2024, 3:27 am

This program can bruteforce the password of any crypto wallet ?

Absence - April 29, 2024, 4:00 am

(Apr 29, 2024 03:27 AM)fxweezy Wrote: [\[CITE\]](#) This program can bruteforce the password of any crypto wallet ?

Negative, stealers are designed to steal sensitive data, not bruteforce wallets or guess passwords.
