Thread: [Auto IT vs C# - Connections between Bytecrypter / Reborn / Diverse / Asylum](#)

Hackers - February 28, 2024, 1:54 pm

I don't really know what auto IT is but this user was sharing some info on other crypters and he mentioned that something is not using auto IT. What does this mean? The context was that someone else said diverse crypt has auto it and vb6. TR/Dropper.Gen5 then says no, it is C# as he remembers well.

Just curious if anyone has any more information about this comment, or the Diverse crypter. It threw me off that he said "keep this between you and I" so I felt that a marketplace discussion was required to help figure out why this would be a secret.

Is there a big diff between auto it & .net?

<https://hackforums.net/showthread.php?tid=3844073>

Look familiar?

Of course, it's Byte Protector / Byte Crypter by [SIM-2362145](#) :

- Remember, according to SIM-2362145 the only things that are shared are the GUI and the licensing system... Just coincidence.

If you have read my other threads, this one should be interesting:

<https://hackforums.net/showthread.php?tid=3908950>

If that's asylum.... and above you see Diverse Crypter... That's very interesting to me because the two GUI styles above showcases one of the most common GUIs involved in marketplace disputes.

If there has been a lie about what an old crypter is using for core tech and TR is telling me to keep

that a secret, then I have to believe this thread is worth posting. It would mean that there may be more than just visual differences between the crypters (which I am labeling "top tab crypter" and "left menu crypter")

Why do I really care?

Well, you see - Diverse crypter is actually tied to Reborn which has a user 'N3oNight' (who I believe is neon_light) in the credits:

I'm still working on 2 other threads.

For one, I'll show you 20+ different versions of these two GUI crypters.

In the other thread I'll be showing information about the arrests of Cryptex, Reborn, reFUD, and related information that ties many of these crypters together in more ways than one.

There are many more topics and crypters to think about, so check out these threads if you have a chance:

<https://hackforums.net/showthread.php?tid=6263240>

- Note: this is not even complete, this is like let's say 25% of the bytecrypter GUI clones.

<https://hackforums.net/showthread.php?tid=6262966>

- This is how my research began, looking into the Aegis platform for 2023/2024 sales. I then moved my way back and am finally hitting 2015 range, and this is where things get interesting.

Loosely related:

<https://hackforums.net/showthread.php?tid=6264283>

If you want to help, please think about researching the following topics:

Quote:EveryCrypt

EveryRecovery

AegisRecovery

AspireRecovery

Diverse Crypter

Codelux Crypter

Cryptex

Reborn

Code Protector

Data Protector

HawkEye

CyberScan

CyberSeal

NET Seal

961 licensing

Topher crypter

2012 Crypter

Good FKN Stufff!!! Holy sh!t dude!!..

Now this is how I know that you are mad legit!! Will keep coming in for updates.

Thanks SIMPR! The story's not over. Hopefully others will help pick up the pieces and help prevent 20+ detections/non-FUD tools from 5-10 years ago being packaged as modern software.
