Thread: [UAC Bypass - Admin cmd.exe - Windows C++ Program - Runtime & Scantime Protection](#)

Hackers - March 3, 2024, 6:51 pm

No longer available.

Spoiler ([Click to View](#))

Administrator Command Prompt

Instantly open cmd.exe with admin privileges

- No UAC Request, Tested in Windows 10
- Protected Runtime by Private Program, Lucid Dream DMT (Data Management Tool)

"FUD" ~ Fully unbelievably discounted ~ at 3-4/72 runtime scans via VT

You must have an official Contract with me to use this tool & for support. The attachment for 100 bytes does contain the full file download links.

[contract=tid]Start Contract[/contract]

You can download the original links from attachments. If you use a contract you are entitled to any future releases/builds of this program too, just get in touch!

This tool allows you to open the command prompt with Administrator permissions automatically, just from opening the program. This tool is intended to help you save time by not having to click any extra buttons to confirm, which is perfect for you if you need to open up the admin terminal quickly, and efficiently.

Open the program

Terminal / Windows CMD will open with Administrator permissions

This download is clean!

This tool is ready to use! No builder, compiler, strange scripts, and no hassle! Here are some scan

results to hopefully help prove you can trust my code. Its clean and it does exactly as advertised with no viruses or hidden packages. Just use the single .exe you download from the attachment on this thread and that's it.

Why use a contract? You are guaranteed to receive the most updated copy if there have been any changes.

See the difference:

On March 10, 2024, you can see that Lucid Dream DMT + this admin CMD is correctly labeled as safe:

The program is exactly the same, but the protection software helps VT correctly identify it as safe. To receive a new copy of this, use a contract.

On March 10, 2024 you can see that Virus Total incorrectly labels 1 of the original downloads as unsafe:

Thank you for providing this great tool to the community, my friend! [Hackers](#) is a trustworthy guy :)

ScrubspooF - March 3, 2024, 8:13 pm

Why did you use virustotal?

Hackers - March 4, 2024, 3:53 am

Thanks Syndicate, appreciate it!

(Mar 3, 2024 09:13 PM)ScrubspooF Wrote: [\[CITE\]](#) Why did you use virustotal?
Honestly? Nobody would help me test this, I wanted to make sure it was a clean program, and it's my first program like this.

I also should be able to rebuild it if needed in future. The admin cmd program is serialized from a memory pointer and then injected into new memory, but this uses no encryption currently - just a PE broken into sections/headers/code blocks, then that is serialized and then when you run the program it is re-assembled and pushed to a new protected memory block.

Once I reach a final stopping point on the Lucid Dream DMT tool I'll be more careful about using VT (or not using it), but for now I wanted to just get this up & running and prove to myself that what I made isn't just a 1-off success on only my personal computers.

I use Virus Total to show you that my downloads are clean.

I also know how easy it is to be at 0-1/40 on a scantime scanner like kleenscan, but still be at 10-15+ on Virus Total, so I wanted to make sure what I built was clean in runtime, not just scantime.

Using virus total is the real strong way to test your stub ?
If your stub doesn't get degraded over time then you know you did a good job:^^)

It's staying at 3-4 for new builds, I know if I put it up on VT then a single file can creep to 5-6/72, but overall it has gone well.
I agree - I would like to be able to write code that is safe according to VT, not tell people they can't scan on VT. That "rule" that is imposed here bothers me because anything I would want to give people should always be considered safe by VT in runtime, but I know what you mean ;)

an4l 1st - March 4, 2024, 6:20 am

does download.txt contain links to the source or to the compiled program?

Hackers - March 4, 2024, 6:25 am

This links to the compiled program.
I'll re-release the compiled prog again in future for new builds.

I'm still working on Lucid Dream DMT and it's very effective so I'm not willing to give that out publicly yet.

I'd give the source for the admin cmd.exe program, but without Lucid it won't work. So I figured best case scenario here was to give what I can - the working program.

Remember, USE A CONTRACT & I will send you the most recent version of this.

Results from today - to prove that my software is SAFE :
