Thread: [FREE UAC Bypass - Admin cmd.exe - C++ Windows Program - "Crypted" Runtime](#)

Hackers - March 4, 2024, 5:45 am

Hi all, I am giving away another tool. This is using Method #2 for UAC bypass. This tool's purpose is for personal use, to open up a command prompt with administrator privileges without requesting permissions. This is intended to help you save an extra click so you can quickly open cmd.exe with admin privs from any of your devices efficiently.

I also am selling Method #1 admin command prompt over here for only 100 bytes:

<https://hackforums.net/showthread.php?tid=6265218>

My goal is to help people access reliable, whitehat tools for things like skipping a permission request click so that everyone can work as quickly as possible from their devices without the hassle of that extra 1+ second for the permission screen to appear forcing you to click a button. Use at your own risk for legal use cases. This program changes registry keys without any warnings from WD or other providers. The program does then put the registry keys back to their original state, but because there are no warnings and it does change registry keys, you are agreeing to use this at your own risk by downloading and opening this file.

Download:

Code <https://www.mediafire.com/file/rdsnimwors86s3i/LucidDreamDMT-Admin-cmd-2.exe/file>

What is Lucid Dream DMT (Data Management Tool)?

It's a custom program that protects runtime code so that malicious software can't inject a DLL into the program or try to steal your confidential data. It's not a crypter, it's a data management tool for your safety & security. Lucid was used here to help protect your admin command prompt from 3rd party tools so you can use your own computer safely.
