Thread: [Telegram API Infiltrator to take down phishing sites](#)

Dystortion - March 5, 2024, 10:40 pm

Edit API token and/or chat ID if you have one in source code found. Then just run the script

Code import requests

import json

```
api_token = "123:123123"
```

```
chat_id = "-123123"
```

```
def get_bot_info(api_token):
```

```
    url = f"https://api.telegram.org/bot{api_token}/getMe"
```

```
    response = requests.get(url)
```

```
    return json.loads(response.content)
```

```
def get_chat_info(api_token, chat_id):
```

```
    url = f"https://api.telegram.org/bot{api_token}/getChat"
```

```
    params = {'chat_id': chat_id}
```

```
    response = requests.get(url, params=params)
```

```
    return json.loads(response.content)
```

```
def get_chat_admins(api_token, chat_id):
```

```
    url = f"https://api.telegram.org/bot{api_token}/getChatAdministrators"
```

```
    params = {'chat_id': chat_id}
```

```
    response = requests.get(url, params=params)
```

```
    return json.loads(response.content)
```

```
# Get Bot Information
```

```
bot_info = get_bot_info(api_token)
```

```
print("Bot Information:", json.dumps(bot_info, indent=4))
```

```
# Get Chat Information
```

```
chat_info = get_chat_info(api_token, chat_id)
```

```
print("Chat Information:", json.dumps(chat_info, indent=4))
```

```
# Get Chat Administrators
```

```
chat_admins = get_chat_admins(api_token, chat_id)
```

```
print("Chat Administrators:", json.dumps(chat_admins, indent=4))
```
