Thread: [EspanaKrypt = FREE Crypter & Builder = Ready to Use AND C++ Source Code = Starter Kit](#)

Hackers - March 6, 2024, 9:41 pm

Before You Spend Any Money ~ Try This!

Hello, I am happy to share EspañaKrypt with you. It is the perfect project for getting started with building your own crypter. Why? Because it works as-is, comes with the fully compiled crypter AND all source code.

EspañaKrypt - Free Crypter
Ready to use program to crypt your PE!

By opening the spoiler below, you are agreeing that you will never use this tool for any illegal purpose, and only for educational, research, or personal use on your own devices.

Spoiler ([Click to View](#))

Code <https://www.mediafire.com/file/9sm2qtq1y4mg36b/EK-Release-0.0.1.zip/file>

or use: <https://github.com/LNodesL/EspanaKrypt/blob/main/dist/EK-Release-0.0.1.zip>

NOTE: These compiled versions work for x64, not 32-bit! I am working on Espana-32 which is intended to protect 32-bit programs with an x86 builder. This current version EspanaKrypt is a 64-bit builder with x64 PE file support only.

Drag & Drop any file onto EspanaKrypt.exe in File Explorer
Drag & drop any valid PE into EspanaKrypt.exe in your file explorer to crypt the file. For testing, the helloworld.exe file has been provided to you.

A terminal window will appear with a log of information. Upon success, your original PE has been encrypted and is ready.

Press Enter to continue & close the terminal window. Galleon.exe will be created for you, which is the final program. Opening this will also open your original PE that you dropped into EspañaKrypt in the first step.

Dont want to drag & drop? Use the Command Line Interface instead!

You may use EspañaKrypt CLI like so:

Code `./EspanaKrypt.exe originalProgram.exe`

Source Code

Includes full instructions for the entire build process & usage. Enhance the program as you wish and re-compile!

By opening the spoiler below, you are agreeing that you will never use this tool for any illegal

purpose, and only for educational, research, or personal use on your own devices.

ZERO2SIX - March 7, 2024, 6:07 am

will check it out and leave a feedback. Nice post.

Hackers - March 7, 2024, 6:42 am

(Mar 7, 2024 07:07 AM)ZERO2SIX Wrote: [\[CITE\]](#) will check it out and leave a feedback. Nice post. Thanks, you can expect to see 12-16 with default settings on Virus Total for a payload that might be at 20-30 detections unencrypted.

So it's a decent one, but this thread is more about helping people get started. I know some people call 10-20 detections "FUD", but I'm not going to say FUD unless it's at 0 lol. However, for the forked repo being so old, this is a good start imo.

Using the methods in EspanaKrypt you can add compiletime encryption & runtime decryption, and other methods to make it even better.

Hope you enjoy it, let me know if you have any questions.

Make sure you check out my other threads which have free C++ source, crypter related tech, and more. I'll also be releasing more starter kits like this in the future, and making updates on Git for enhancements.

Bigthingsagwan - March 7, 2024, 8:49 am

(Mar 7, 2024 01:44 PM)SIM-5186353 Wrote: [\[CITE\]](#) Ole tu!!!! ?

Pero cuando inicio la aplicacion me da un error que dice que no puedo ejecutar la aplicacion.

Can you send me the exact error message?

You need to drag & drop a program onto the .exe, or use CLI format. You cannot just open up the crypt. This is a NO-GUI crypter.

I don't speak good enough Spanish, pero hablo espanol pequeno/pequito? Lo siento, pero me gusta ayudarte.

now for GPT-translate:

Code ¿Puedes enviarme el mensaje de error exacto?

Necesitas arrastrar y soltar un programa sobre el .exe, o usar el formato CLI. No puedes simplemente abrir el crypt. Este es un crypter SIN-INTERFAZ.

SIM-63814 - March 7, 2024, 1:44 pm

You are amazing! This will be helpful to learn. God bless you!

I will do some research into this later.

What type of original file was it? It's possible I need to update this to handle other types of PEs

Do you know if it's C/C++, .NET, etc? Or if its 32bit vs 64?

SIM-5186353 - March 8, 2024, 1:34 am

OK, yeah, I'm not sure, I don't use those types of tools and I don't offer support for them - assuming that you are using a legal remote access tool, you would need to figure out what type of PE it is and why it's not working. Espana has worked so far with every c/c++ .exe I've tried.

No problem, let me know if you need any help but keep in mind I only offer whitehat support and you agree to not use my tool for illegal purposes by using it or accessing the github, or clicking any link in this thread.

Thanks.

Hackers - March 20, 2024, 11:10 am

If anyone wants any help with Espana let me know in thread here!

I will be bringing over some new methods to EspanaKrypt soon for a Version 2 release. Stay tuned :)

timmi888 - March 30, 2024, 5:32 pm

this isnt working with quasar it just says file isnt valid x64 pe -__-

Hackers - March 31, 2024, 6:19 am

(Mar 30, 2024 05:32 PM)timmi888 Wrote: [\[CITE\]](#) this isnt working with quasar it just says file isnt valid x64 pe -__-

Hi sorry to hear that - that's correct, this is only currently working with x64 PE files. I am working on a new one 'Espana-32' which is a x86 builder supporting 32-bit programs.

I am not sure what 'quasar' is - if it is not a valid x64 PE file (for ex if it is 32bit) then it will not work. Make sure anytime you use this program, its code, or any other release in my threads that you are following the terms of service 100%.

danbath05 - June 22, 2024, 2:52 am

Thank you very much, i will try it out, can thei kripter work with AsyncRAT??

dwshark - July 25, 2024, 2:32 am

thank for for this awesome job!

but i have little error, if you can help please

when i open EspanaKrypt.exe this happened <https://gofile.io/d/utbuqi>

and when i tried to press any key the CMD closed

what i do?

secret_code - July 28, 2024, 4:13 am

(Jul 25, 2024 02:32 AM)dwshark Wrote: [\[CITE\]](#) thank for for this awesome job!

but i have little error, if you can help please

when i open EspanaKrypt.exe this happened <https://gofile.io/d/utbuqi>

and when i tried to press any key the CMD closed

what i do?

did you run the executable from a console or you used to click the exe from the folder? you need to run it from a console so you can supply those required arguments that is specified in the error message, i didn't read the code of it, but probably you can run like "> ./EspanaCrypt.exe -h" or -help or help idk try them out, is should be some kind of help page if OP created it, all the message says is you need to supply arguments from the CLI.

(Jun 22, 2024 02:52 AM)danbath05 Wrote: [\[CITE\]](#) Thank you very much, i will try it out, can thei kripter work with AsyncRAT??

why not just try it out? as i saw it is only x64, if what you trying to intersect it only supports x32 it wont work, just try out if both are x64...

Stanley - March 16, 2026, 8:21 pm

I'm Stanley HF's helper bot. The OP (original poster) of this thread wants everyone to see this page and has elected to bump it to the top of the showthread listing. Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first post.

If you haven't already read the first post of this thread we encourage you to do so.

Thanks,
Stanley

Hackers - April 14, 2026, 8:30 am

Old, but this project serves as a good example for people wanting to learn how to create a builder, their own final packed programs, and different runtime methods.
