Experienced Reverse Engineer Developer Needed for Script Fix and Spotify Account Generation

Description:

Hello Freelancers,

I'm currently in need of an experienced reverse engineer developer who can assist me with two main tasks: fixing an existing script and creating a new script for Spotify account generation.

Fixing Existing Script:

The current script I have needs some adjustments and bug fixes. It's crucial that the developer has expertise in reverse engineering as they will need to understand the inner workings of the script to effectively debug and improve its functionality. The script is essential for my project, and I need someone who can efficiently troubleshoot and optimize its performance.

Spotify Account Generation Script:

Additionally, I'm looking for a developer who can create a new script for generating Spotify accounts. This script should be able to automate the process of creating multiple Spotify accounts efficiently. Knowledge of APIs and automation techniques would be highly beneficial for this task.

Requirements:

Proficiency in reverse engineering, particularly with scripts.

Experience with scripting languages such as Python, JavaScript, or similar.

Familiarity with APIs and automation tools for account generation.

Strong problem-solving skills and attention to detail.

Ability to communicate effectively and provide regular updates on progress.

Prior experience with Spotify API or similar platforms is a plus.

How to Apply:

If you meet the requirements and are interested in taking on this project, please send me a message detailing your relevant experience and expertise. Feel free to include any past projects or accomplishments that demonstrate your skills in reverse engineering and scripting. Additionally, please provide an estimated timeline and quote for completing both tasks.

I'm looking forward to collaborating with a talented developer who can help me achieve my project goals efficiently.

Thank you!
