Thread: [Need to match client location -Android VPN?](#)

Dongottur - March 13, 2024, 5:59 pm

I was told N-o-r-d let's you specify location by entering an ip address, but only in Bird desktop versions.

True/false?

Is there an android version of any VPN that would actually do this?

How would i go about securely/anon connection to my clients address, which isn't in my state, so openups they need to finish on their end go thru?

AcTiviTy - May 17, 2024, 7:55 pm

I'm actually looking for same, have not seen any

PpIllaSt - May 22, 2024, 8:34 am

Wondering the same, all the ones I've tried don't work

The IP address would have to be one of [censored]'s servers. You're trying to connect to a location in a specific state, right?
