Thread: [Short your Links and Earn \[FREE\] \[HOT\]](#)

PPIRage - March 19, 2024, 12:24 pm

[Short4.io \(no Ref\)](#) is a link shortening tool similar to Adf.ly, where you shorten your links and get paid for incoming traffic, with an average CPM of \$10, and payouts can be made through LiteCoin, Bitcoin, and later on PayPal.

Visitors go through a normal page with advertisements, no viruses, no pop-ups.
The CPM is high because users must go through 4 steps where they have to click on ads, which must be opened in a new tab to proceed to the next step.

Yes, some may say this could be annoying, but high rates don't just come out of nowhere, and as mentioned, no pop-ups, no malware advertising, or anything of the sort.

Referring friends would bring an additional 10% for life.

Veterans surely know the best ways to distribute links. As a tip for those who have no idea, X is currently very good at this. Otherwise, cheats and hacks for games have always worked, as people are motivated to complete everything to progress.

The clear difference here from CPA lockers is that users don't have to sign up for anything or install anything; just click on ads, and that's it.

Otherwise, any type of traffic (except VPNs, bots, or similar) can be pushed to the link. Even adult traffic is okay.

If you have any questions, I am happy to help.

Sticky Bot - March 19, 2024, 12:47 pm

Hi, I'm Sticky Bot. The owner of this thread has purchased a Paid Sticky. Hack Forums does not get involved in deals or deal disputes. We do not vouch for the product or the service offered by members. Please note that all deals are at your own risk. The sticky will expire on Mar 26, 2024. If you or a loved one are interested in buying a sticky please visit this page: [Buy Sticky](#). For more information about Paid Stickies you can read our [Help Doc](#).

I tried it once it's nice but not perfect. Many times stuck on ads page and you need a miracle to reach to masked link .

That's my YT subscribers told me

Okay, this is the first time I'm hearing about this. Could you tell me your username and what exactly

seems to have gone wrong?

Would it work if i made a automated script that changes IP addresses very minute that would give enough time for it load the page and location from where the ads is been clicked and automate the click on the ads?
