Thread: [I want to learn how to code a hVNC in python](#)

sdfniaefbio - March 23, 2024, 5:26 am

I want to make a hvnc in python which will allow me to access people's computers remotely without them seeing. Tbh I'm not even sure how a hVNC works and I would have no clue how to make a hVNC in python. Can someone explain to me how I'd do something like this?

while it is theoretically possible, it is not a good idea. Python is slow, so the hvnc would be incredibly slow. like 2 fps at most. also, it would produce really large stubs, which makes it hard to send said client file to a victim.

You are right and I strongly suggest to opt to a much better language suitable for these sort of endeavors. Best suggestion would be VB .NET, C#, or C++ as there are many resources out there for OP to begin with.
