How to hack Facebook if you know the email and phone number of someone

Claymora - March 27, 2024, 5:46 am

Use intelbase or leakpeak to get common pw and try those. If sus try VPN to their location

Tons to choose from: Mullvad, Proton, Purevpn, AirVPN

Whichever services your area and fits your pricing. Would recommend one anyways for way more things than hacking

How does that help in hacking Facebook?

From what I tell a lot of accounts I've tried in the past seemed to be region locked rather than device factored authentication based. I don't know if this has changed but generally many sites will send an alert and prevent login if the ip and/or device connecting is too odd compared to the previous successful logins
