Thread: [How can I start malware analysis and malware development](#)

rask4l - March 26, 2024, 9:14 am

I have been coding in python for a about a year now and I want to learn a how to develop malware that can actually do things like bypass antiviruses.I did a bit of research and I was told I should learn C so I learned the basics but what do I do after I am proficient in the fundamentals of C.Basically my question is how can I learn how to make malware that bypasses antiviruses

So the Main goal is to get Fluent in the Coding Language and u will Learn thoose things to the Side. I would Mainly look into Registry Stuff and Memory etc.

Also Try Making ur Normal Programs as Undetected as Possible and Learn Detection Possibiltys
