Thread: [How to hack email that is not in use nor connected to any thing](#)

Xzxzx9377 - March 26, 2024, 2:42 pm

So i want to hack an email which is not connected to any phonenumber or any other info so we cannot recover it. Also we cant do phishing cause no one is using that email right now.

SIM-5457022 - March 27, 2024, 11:30 pm

Do you know the email address?

Syndicate - March 27, 2024, 11:34 pm

There's a few things that you can do. The easiest way is basically to social engineer your way to get access to it

Moookie - March 28, 2024, 12:40 am

I guess it really depends on which platform the email is connected. Every platform is different, so approach may vary.

Syndicate - March 28, 2024, 12:45 am

How do you know that the email address isn't used anywhere though? Seems kind of suspicious

Your best choice would be guessing or reverse engineering, thats what i think

cakeoalex - March 28, 2024, 8:05 am

Old junk email claims are easy to bruteforce now a days
, Other methods require cracking.

TayK - March 28, 2024, 8:20 am

Social engineering is your best bet. Unless you have access to their phone lol

Causeee the email belongss to the person i know personally.

Please what is the email, i will send u a pm.

DemonAsylum - April 7, 2024, 3:34 pm

Out of curiosity and if you're willing to share of course, what is the reason? Like why do you want to hack the email I mean? You say no one is using it, but I guess it could still be connected to something. Or maybe it's an OG kind of email you're wanting for yourself or to sell.

Were you not reading? There's no one to social engineer.

The only thing that can really be done is to search for password leaks.

I'm not certain on this but, I believe what he meant by social engineering is by contacting the email provider pretending to be the owner of the account?

I didn't think of that because there's no way to verify the owner.

Nah he didn't clarify that after a previous objection to his suggestion, it'd also be wild to say that's the easiest way with the amount of context we have if it means SEing the service provider lmao

I see, maybe he will update us with specifics on what exactly he was suggesting

Well i just wanted to learn and also the account is of my friend and i had taken consent with her as she even doesn't remember the password. She wanted it back so i thought may be i can help with it. I am just a newbie in cybersec, currently i am a full stack dev.

I take it back. One SE technique is to generate a list of passwords based on personal details. It may be worth a shot. <https://github.com/tch1001/pwdlogy>

Yes, I have used my name in passwords. It happens.

I'm not sure if cycling proxies would be enough.

Guns3524 - April 21, 2024, 11:40 am

in such a situation, you will most likely do nothing. it also depends on what e-mail it is

happygonutty - April 21, 2024, 3:01 pm

Then just make a new one. Lol. There is no one to social engineer, there is no way to reconnect it since there are no connected phone numbers and other info to recover it. You are on a dead end my friend.

se7nup - April 22, 2024, 2:43 am

Is it possible to get back or crack the old one emails if it's possible plz can anyone can tell me how and which method is good
