Hello

We need someone that can build a shiller bot or mass dm bot to grow our Telegram work.

If you now another method to grow our telegram group please let me know.

It is a telegram group about a meme token.

Send: @whisperwallet

Kind regards

daario - May 7, 2024, 9:45 pm

Hello, Who can prevent a program from detecting remote desktop on my PC? I use a gaming program and the program tries to prevent people from out of state from playing on the platform. I have the program installed on my home PC (in the state) but anytime I'm not at home I try to connect to my home PC through Remote desktop to play but somehow the program could detect that I'm connecting through Remote desktop and then prevents me from playing. I wish to find a solution to this. How to trick the program from detecting remote desktop on my home PC. Please don't hesitate to contact me with your offer if you can solve this problem for me.
