Thread: [What to do with some1 ip? / Browser cookies export](#)

wastcott - March 29, 2024, 11:05 am

Hey! I'm wondering what I can do if I know someone's IP address. A bit of an obvious question, I feel embarrassed...

The second thing is that I have physical access to the device with logged in accounts in the browser. I've already exported all the cookies, but what does it really do for me? What do we focus on in such situations?

I would really appreciate any answer, I really respect people sharing their knowledge.

Have a good night!

Don't feel too embarrassed, but a quick search will show a long list of similar questions. Simple answer is nil, nada, nothing. You can lookup the location of the IP address range to which a public IP address belongs. That's it unless the target is both smart enough and stupid enough to make something vulnerable accessible to the Internet.

Depends on what the cookie stores. ****WARNING**** Real hacking ahead.
