Thread: [Create phishing link, discord message](#)

Greekhoax - March 30, 2024, 9:26 am

I need to create a phishing link to send someone over discord. My first question is, is it possible for me to create this over iPhone as that's my only device on hand atm. I'm looking for something to grab an email & password that doesn't look suspicious. If I could grab a name even better. I was thinking something perhaps porn related cause he's a total degenerate.

The only reason I'm doing this is this person has been stalking/harassing on X & YT for a year. He makes burner accounts when he gets banned & continues. I was able to use grabify & scare him off with his IP, but he realized I couldn't do anything with that info. I hit a dead end trying to use that IP to identify him, so I realize I need to try another tactic. Please help :)

You might wanna post that in the "Hack" section. That's where the serious hackers hang out.

You need to upgrade account to be able to delete posts. You can't delete threads though as far as I know.

Greekhoax - March 30, 2024, 11:13 am

Bummer. Reposted on Hack section like you suggested. Was going to delete this thread & found out I couldn't, other thread shut down by mod for having multiple of the same thread, lol. So hopefully someone answers my question here.

Are you only looking to grab his IP address ?

I am pretty sure, you can do that using a simple php script and send the link of the same to your target.

No, I already have his IP. It doesn't help me identify him. I want his email & or a password he uses. More sources available to identify from that info. Can send him a discord message, but it has to be disguised well for & enticing for him to fill out.

DramaKing - March 31, 2024, 4:55 am

Search for Discord token grabber.

Greekhoax - March 31, 2024, 9:44 am

Thanks. Can you set this up from an iPhone tho?

gregokis02 - March 31, 2024, 10:36 am

The best advice I can give you is to not engage. Try to block this person and move on. Report him to authorities or the platforms he's harassing people on.

By trying to "phish" him, you're unlikely to actually get any real info. Most services use 2FA, so even if you did get real info, you'll likely be blocked by that. Lastly, even if you do get his information, what do you plan on doing with it that will stop him from harassing people on the internet?

Maybe you have good intentions, but by participating in this cesspool part of the internet, you're really just fuelling the fire and not stopping anything.

AfunnyBunny - March 31, 2024, 4:13 pm

Tip with phishing links, you can embed links so they appear as the cloned sites domain.

[Real link](Phishing link)

Paolo200217 - March 31, 2024, 5:23 pm

that's a guide or just a threads for learn?

chatgptproo - April 1, 2024, 8:04 am

Anyone got token grabber

DramaKing - April 1, 2024, 8:05 am

you can download kali linux on your iphone and do it ? but seriously, buy a cheap laptop for 200-300\$? and install the kali linux operating system and you can even find how to carry out phishing on youtube because there is plenty of it on the internet
