Yup, Diggz Xenon is down, even the pre-release KODI 20.1 OMEGA build isnt working! only STUPID REAL DEBRID and DEBRID only builds work (IF AT ALL) you gotta pay for real debrid now.

used to have the BEEEST one click setup built up custom as could be... now my fav repo is dead...

Anyone know any other CURRENT good builds with good Repo's?

having a bit of an issue finding one that focuses on movies/tv and not so much live TV i dont care abt live TV lol

Just want my infinite access to movies back cuz torrenting isnt the safest thing in the world these days

thx in advance!

Interesting...I'll keep my eye on this. Don't have any suggestions at the moment.

DIGGZ repo was MASSSSSIVE , the BEST!

I cant fathom what could have happened! i understand upgrading but kodi 20.1 is still in pre-release, and only the Diggz Chef Omega Works on it but its DEBRID only, and most repos come

back empty as of this morning. just tried again. fresh install.....

Def keep me posted!

Have you tried using Kodi 21.0 omega?

**Eran** - April 7, 2024, 3:48 am

Only used Kodi maybe twice in my life. No big deal for me.

actually yes, it was a typo above. the Nexus omega wizard is useless. all the plugins are dead

even scrubs V2 and Homelander and Asguard

do you currently use a different "Black market" streaming service/app/device?
