Thread: [What Paid Proxy Provider Do You Recommend?](#)

SIM-2501407 - April 8, 2024, 4:33 pm

Hey folks,

I need a fair amount of proxies (20 to 50) for a low intensity task (running a selenium test script to sign into a site and clicking a few things). If you have a trustworthy provider that meets this requirement, please let me know.

Given I am signing into the website, I am not comfortable using publicly available proxies.

Thanks,

[SIM-2501407](#)

Try [deleted], which is the best socks5 Proxy, 150M+ rotating and static residential proxies for covering 200 countries.

You can visit and check that below proxy sites whether it's fulfilling your requirement or not (considering low and medium budget/ monthly based on daily limited proxy quantity/ package):

nsocks

tisock

dichvusock

betasocks

It really depends on the type of proxies you're looking for/what the proxies will be used for. There

are different proxies, for different use cases. Some work better for doing somethings, while others work better doing other things. If you can drop a little more info, I'll be glad to point you in the right direction as I'm using proxies everyday.

Essentially once signed into the website, I go to check if any appointments are cancelled. If there aren't any appointments available, I am redirected. So i just have a random timeout loop for a few seconds to continue going to that page until no longer redirected, at which point, the script will automatically make an appointment. Given anybody can cancel at any point, want to run it 24/7.

Appointment is for passport/visa services website. Doing this as a favour cause the website's scalability sucks major ass so getting in before new appointments available are booked is impossible. Trying to up our odds by running threads/proxies for multiple accounts. No PII is exposed but it's not my account so trying to be respectful of their data.

I think really all I need is a half a dozen of reliable proxies. I don't need the proxy provider for pseudonymization for illicit activities, or for it to have the fastest speeds, or a need for ton of different addresses. The site does not appear to care about IPs too much (if at all), but I would still lean towards associating one account to a given proxy.

Thanks, i'll check these out.From the information given, it doesn't sound like you will need mobile or residential proxies.. some datacenter proxies should work perfect. These companies have reliable and fairly priced datacenter proxies.

Yeah like it says above it isn't required to have residential or mobile proxies unless datacenter proxies are blocked by the passport appointment website. Personally, for general easy work I would use IPRoyal. Static datacenter proxies will be fine but test one first.

If you need some to test with let me know.

wqwq - April 18, 2024, 2:54 am

Bitdefender! Forza Ferrari F1!

Thanks guys. Think you have provided all the information I require. I'll close out this thread & will DM/PM if I have additional questions. Much love.
