Nj Dangerous edition Tutorial (Remote Admin Tool)

This is quick tutorial How to rat someone outside of your network.

First we need to install windows 10 to vmware:
search up on yt

Then we need to open ports to your network you can done it by going on your root ip prbly 196.168.0.1 or 196.168.100.1 you can find it when you go to cmd and type ipconfig :
Wireless LAN adapter Wi-Fi:

```
Connection-specific DNS Suffix . :  
Link-local IPv6 Address . . . . . :  
IPv4 Address. . . . . :  
Subnet Mask . . . . . :  
Default Gateway . . . . . : 192.168.100.1
```

Then go to your router and see your name and pass name should be root or admin
navigate to the forward rules and make new forward rule then select your local computer ip

Wireless LAN adapter Wi-Fi:

```
Connection-specific DNS Suffix . :  
Link-local IPv6 Address . . . . . :  
IPv4 Address. . . . . : 192.168.100.15 <----- this one  
Subnet Mask . . . . . :  
Default Gateway . . . . . : 192.168.100.1
```

now select this two then search up on google "what is my ip" and copy that ip set is as external ip then set port to 1111.

THIS METHOD IS 100% UNSECURE FOR YOU BECAUSE IF SOMEONE KNOW WHAT THEY DOING THEY CAN OBTAIN YOUR IP IN SECONDS. FOR LITTLE BIT OF MORE PROTECTION USE DDNS

Now when you have setuped everithing you can download nJ rat Dangerous edition i dont know if this hase rat in it but you can use vmware so np for you
insert github link and after it go to [simalei/njRAT](#)

now download it open and set port to 1111 and press save and start listnen now navigate to the

build. right corner on panel that is located down press add hostname insert your external ip than select spread to usb, hardisk and press automatic password grabber. select some icon build it and now you done just manipulate someone to download it or use beef and install it on or do whatever but they need to run it ?
