There are no images, no details, no builders, no videos, it's complete nonsense. I think the person who shared this has a goal of defrauding people.

provide a trial and a legit check without any problem. I hope to get good reputation here.

I am really looking for a good FUD crypter, but b4 i buy:

You need a review of your crypter from at least one respected member !
Review must contain detection result of "scantime" and "runtime"

If you have any Video of your bypassing session, please feel free and post it.
