Thread: [Termux Hacking without root](#)

Merro1144 - April 17, 2024, 6:33 pm

Hello everyone please tell me some Methods for Beginner hacking with Termux on a non rooted device.

Thanks for your reply :)

DramaKing - April 17, 2024, 7:26 pm

Use Nethunter Rootless. It's enough for basic recon and password cracking until you root and/or reflash your phone.

Wise advice here ^^

This will get you going.

Certainly. You can try to do the same things by fetching python and ruby scripts or compiling binaries yourself. Why would you?

Absolutely. I would say that you need solid knowledge of system administration to understand hacking. Hacking is being able to break things and exploit computers in unintended ways. Networking and programming are just as important.

Thanks. I have been searching it for a 2 days no one has replied but you did thanks alot

Which programming language do you think is good for beginners
