Thread: [Where Should I start with ALFA Wireless card?](#)

jampat17 - April 18, 2024, 11:55 am

Hi, a while ago I bought an ALFA wifi card when my internal one died and have recently found out that the chipset of the card can be used for various wifi exploits and was curious where to start. I believe the model is an 'AWUS036NHA' Any help would be appreciated. Thanks!

OSWP is the OffSec cert for wireless pentesting. It's pretty easy to absorb. The exam itself is expensive, but you could read public study-guides on the topic and learn quite a lot.

You should start in the correct forum for Wifi. That adapter is an old cheapo, and the 'wifi exploits' are much harder to employ today.

Also, don't hack other people, or you may have trouble with the police.
