Thread: [Silent Miner Question](#)

gitarrist90 - April 19, 2024, 12:42 am

I have two good computers which I can use for bitcoin mining.
Does anyone knows an good silentminer I could use for bitcoin mining?

throwaway622 - April 23, 2024, 12:10 am

you can't mine BTC on a PC. you could mine monero or some other altcoin.

gitarrist90 - April 23, 2024, 4:35 am

Do you know good software for it?

Eran - April 23, 2024, 7:15 am

Not BTC but you can mine XMR. No resources from me tho, sorry :/ I'm sure you can find something if you do your research

burnley313 - April 23, 2024, 8:42 am

U cant mine btc with with normal pc anymore. It was profitable like 10yrs ago. Go with some specialized device called asic

gitarrist90 - April 23, 2024, 8:46 am

ok thank you, i will check it out! Do you have any recommandations for asic?

go to whattomine , if you know what gpu's your pc's have you will know what to mine with them to be most profitable

alcinzal - April 30, 2024, 9:30 am

UnamSanctam has made a pretty good tool for silent mining (<https://github.com/UnamSanctam/SilentCryptoMiner>), although it's main purpose is for spreading to other computers, so you can mine crypto on their computers unbeknownst to them, however you could also build one for your own using. You have different options like: How much power the computer uses to mine crypto while you are using the computer. How much power the computer uses to mine crypto while you are away from the computer (idle). And more.

BlackWidow1 - April 30, 2024, 11:25 am

for the BTC coin will not be enough 10 years ago it was still possible.

VIVALACRYPTESTA - April 30, 2024, 2:40 pm

One asks for a "SILENT" miner, because of blackhat ideas. Normal folks ask for what's the best Bitcoin Miner, not silent one. Anyway, mining is not profitable anyway, unless you have below \$0.05/kWh or free electricity.

LSD - April 30, 2024, 3:09 pm

The only way to make mining worth it is to start an LLC and take out a small business loan, and treat it like a business. You will need 30k to make any meaningful profit and even the cutting edge miners

of today will be less and less profitable as time goes on.

However, if you can stomach a loan, and you have the IQ and ambition to make it all work, you would 100% have to put all of your profit towards paying that loan off.

Then, as miners do, you hodl the coins you've mined until the price balloons, this effectively raises your overall profitability because the USD you earned is held up by the appreciation of BTC itself, and you aren't having to rely on your hashpower keeping up just to make it worth it.

Not to be a downer but unless you can buy electricity at 0.08 cents per KWH and have substantial amount of starting capital and time to manage the business you cannot compete and it wouldn't be worth your time and money. You can spend your time like I did trying to figure it all out but that's the cold truth as far as I'm concerned.

But if you insist on making 20 cents a day and paying 16 cents in electricity, the AVALON brand has a new starter miner out for about \$100
